

Working Towards a "Gruener" Environment

Gruene Environmental Construction

FIELD SERVICES...

Gruene Environmental Companies (GEC) was founded initially as an environmental field services company in 2008. Today, Gruene Environmental Construction is a division that focuses its resources on remediation projects including UST removal's, impacted soil excavation, and industrial cleanings as part of a turn-key environmental package. GEC combines 40hr HAZWOPER trained field crews with an extensive knowledge of waste management skills to complete your project. GEC can provide the full range of services that support activities necessary for various specialized environmental projects. From large scale on-site projects requiring access to large and diverse equipment resources to small scale cleaning, GEC has the expertise and personnel to provide our clients the proper tools to complete projects in a safe and cost effective manner.

ADVANTAGE TO GRUENE...

A distinct advantage to using GEC to manage your environmental project is that GEC owns and operates key pieces of remediation equipment regularly used on projects. This allows us to provide services with reliable and familiar equipment at competitive rates unlike other service providers that rent equipment to complete projects. Another advantage is our insurance coverage. Due to several of our clients' requirements, Gruene Environmental Companies carries insurance that surpasses most of our competitors. Our certificate of insurance is available upon request, or can be found on our website at www.GrueneEnviro.com.
