

Working Towards a "Gruener" Environment

Gruene Plant Services

Focus on what you do best...

Let us do what we do best.

Gruene Plant Services strives to create the most cost effective, safe, and compliant program for its customers. At Gruene Plant Services our flexibility allows us to customize and tailor a program around the specialized needs of the customer. This ability separates us from our competitors.

Gruene Plant Services has all the resources needed to provide a world class environmental management service. Our core competency is based on the onsite management of your company's environmental program. These services include line side pickup and labeling of waste containers. Our company has a substantial fleet of transportation assets ranging from roll off trucks to specialty chemical tankers, as well as a registered 10-day transfer facility in central Texas. Gruene Plant Services has established relationships with the top waste and recycling vendors across the country, and have negotiated preferential rates. This allows us to provide our services at a reasonable cost typically lower than the industry standard. We also are a smaller company than our competitors. This allows us to remain more reactive and flexible to the customer's ever changing environment whether starting a new process or improving established processes.

Gruene Plant Services does not own any treatment facilities or technology. This allows us to provide our customers with a flexible and economical program. We can behave much like a generator in the market place with one key advantage: Environmental Management is our core competency. We customize our programs to fit the needs of our clients. Our well rounded portfolio of outlets allows us to stay on the cutting edge of technology as well as provide several options in the marketplace promoting healthy competition and lower pricing.

A Commitment to provide all environmental services quickly and efficiently while fulfilling the needs of our customers is the cornerstone of our success. Gruene Plant Services is continually focused on a professional, effective, and safe approach to all projects. Our goal, through a collaborative effort with our customers and vendors, is to Work Towards a "Gruener" Environment.
